fulgur WASM demo

Browser-side HTML → PDF rendering, no server required. This is the B-3c step (config mirror) — page size, orientation, and PDF metadata are configured from JS via `engine.configure({...})`. Asset bridging (font / CSS / image) from B-2 / B-3a is unchanged. The output is previewed in-place below using pdf.js.

HTML input

Render config (forwarded to `engine.configure`)
